

OXYGEN WIFI CONTROLLER TECHNICAL REQUIREMENTS

If you choose to control your OXYGEN recuperator with a WiFi controller, it is essential to ensure that the controller works smoothly:

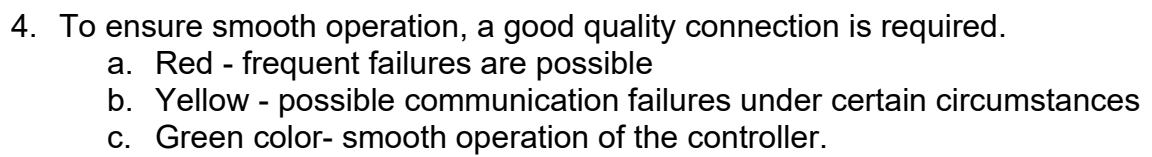

1. Ensure that the internet router supports **2.4 GHZ** frequency and **B/G** network

2. Your smart device must be on the same network as the connected WiFi module.
(192; 174.....; etc.).

3. We recommend connecting to a less congested network channel, as there may be problems with the communication of the controller if the channel assigned to it is very congested.

5. No additional security settings have been added to the smart device.
